OM protein - protein search, using sw model

September 15, 2004, 10:30:21; Search time 8.94737 Seconds (without alignments) 58.196 Million cell updates/sec Run on:

US-09-673-795-2 51 1 SLFEGIDIYT 10 Title: Perfect score: Sequence: BLOSUM62 Gapop 10.0 , Gapext 0.5 Scoring table:

141681 segs, 52070155 residues Searched:

141681 Total number of hits satisfying chosen parameters:

Minimum DB seg length: 0 Maximum DB seg length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt_42:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Wolecular cloning and expression of a Penicillium citrinum allergen
with sequence homology and antigenic crossreactivity to a hsp 70
human heat shock protein.",
clin. Exp. Allergy 27:682-690(1997).
-!- ALLERGEN: Causes an allergic reaction in human.
-!- SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDIJINE-863304452; PubMed=3017985;

                                                                                                                                                                                                                                                                                                                Norbeck J., Blomberg A.;
"Protein expression during exponential growth in 0.7 M NaCl medium of Saccharomyces cerevisiae.";
FEMS Microbiol. Lett. 137:1-8(1996).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Garrels J.I., Futcher B., Kobayaahi R., Latter G.I., Schwender B., Volpe T., Warner J.R., McLaughlin C.S.;
Submitted (SEP-1944) to Swiss-Prot.
-i- FUNCTION: SSA2 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES
BOTH ACROSS THE MITOCHONDRIAL MEMBRANES AND INTO THE
BNOPLASMATIC RETICULUM. A FUNCTIONAL DIFFERENCE BETWEEN YEAST
SSA1 AND SSA2 PROTEINS IS EXPECTED. SSA2 CAN PARTICIPATE IN THE
ATP-DEPENDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.

Genet. 25:196-196 (1994).

-1- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILLIZE PREXISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF UNBULY TRANSLATED POLYBEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THE HSP70S IN MITOCHONDRIA AND THE BNDOPLASMIC RETICULOW PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE FOR PROTEIN TRANSLOCATION WITH HSP90. THEY PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILLITY TO RECOGNIZE NONATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIAN EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYBEPTIDES DURING TRANSLATION AND MEMBERANE TRANSLOCATION, OR FOLLOWING
                                                                                                                                                                                                                                                                                                                 Gaps

A Structure of a new crystal form of human hsp70 ArPase domain.";

Acta Crystallogr. D 55:1105-1107(1999)

1. Acta Crystallogr. D 55:1105-1107(1999)

2. I-FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE

3. PREMISTERINE PROTEENS AGAINST AGASREGATION AND MEDIATE THE POLDING

OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THE HSP70S IN MITOCHONDRIA AND THE ENDOPLASMIC

RETICULUM PLAY AN ADDITTONAL ROLE BY PROVIDING A DRIVING PORCE FOR PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PROFESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATIVE

CONFORMATIONS OF OTHER PROTEINS. THEY BILD EXTENDED PEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING

STRESS-INDUCED DAMAGE.

1. INDUCTION: By heat shock.

1. SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Complete nucleotide sequence of a porcine HSP70 gene.";
Immunogenetics 35:286-289(1992).

-!-FUNCTION: In cooperation with other chaperones, Hsp70s stabilize preexistent proteins against aggregation and mediate the folding of newly translated polypeptides in the cytosol as well as within organelles. These chaperones participate in all these processes through their ability to recognize nomative conformations of other proteins. They bind extended peptide segments with a net hydrophobic character exposed by polypeptides during translation and membrane translocation, or following stress-induced damage.
-!- SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Biochim. Biophys. Acta 1219:64-72(1994).
Biochim. Biophys. Acta 1219:64-72(1994).

-! FUNCTION: In cooperation with other chaperones, Hsp70s stabilize preexistent proteins against aggregation and mediate the folding of newly translated polypeptides in the cytosol as well as within organelles. These chaperones participate in all these processes through their ability to recognize nonnative conformations of other proteins. They bind extended peptide segments with a net hydrophobic character exposed by polypeptides during translation and membrane translocation, or following stress-induced damage.
-! INDUCTION: By heat shock.
-! SIMILARITY: Belongs to the heat shock protein 70 family.

Volpe T., Warner J.R., McLaughlin C.S.;
Submitted (SEP-1994) to Swiss-Prot.
-!- FUNCTION: SSA1 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES
BOTH ACROSS THE MITOCHONDRIAL MEMBRANES AND INTO THE
ENDOPLASMATIC RETICULUM. A FUNCTIONAL DIFFERENCE BETWEEN YEAST
SSA1 AND SSA2 PROTEINS IS EXPECTED. SSA1 CAN PARTICIPATE IN THE
ATP-DEPRENDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-! SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bos taurus (Bovine).

C. -!- FUNCTION: IN COORERATION WITH OTHER CHAPERONES, HSP70S STABILIZE
PREAKISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING
OF NEMLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN
ORGANELLES: THE HSP70S IN WITHOCHONDER, AND THE ENDOPLASMIC
ORGANELLES: THE HSP70S IN WITHOCHONDER, AND THE ENDOPLASMIC
ORGANELLES: THE HSP70S IN WITHOCHONDER, AND THE ENDOPLASMIC
PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION
PATHWAYS IN COORERATION WITH HSP90; THEY PRATICIPATE IN ALL THESE
CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDES
COMFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDES
COMFORMATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING
STRESS-INDUCED DAMAGE.
-!- INDUCTION: By heat shock.
-!- SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. "Cloning of cDNA for the rat inducible 70KD heat shock protein
"Cloning of cDNA for the rat inducible 70KD heat shock protein
(HSP70).",
Submitted (NOV-1993) to the EMBL/GenBank/DDBJ databases.
-! SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.
EMBL; Z27118; CAA81642.1; -.
HSSP; P08107; 1H30.
GG; GO:0005524; F:ATP binding; IEA.
InterPro; IPR00102; HSP70.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

drak-type molecular chaperone (clone pTH870.7) - rainbow trout (fragment)
Nylternate names: 70K heat shock protein
C;Species: Oncorhynchus mykiss (rainbow trout)
C;Date: 21-Peb-1997 #sequence_revision 21-Feb-1997 #text_change 20-Aug-1999
C;Accession: 151344 #sequence_revision 21-Feb-1997 #text_change 20-Aug-1999
R;Kothary, R.K.; Jones, D.; Candido, B.P.M.
Mol. Cell: Biol. 4, 1785-1791, 1984
A;Title: 70-kilodalton heat shock polypeptides from rainbow trout: Characterization of CA;Reference number: 151344; MUID:85036330; PMID:6092938
A;Accession: 151344
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Accession: 151344
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Cross-references: GB:KO2549; NID:g213803; PIDN:AAA49562.1; PID:g213804
C;Function: involved in protein folding and assembling/disassembling of protein compl
C;Superfamily: heat shock protein 70

A; Purnelle, B.; Goffeau, A.
Submitted to the EMEL Data Library, April 1996
A; Description: The sequence of 32 kb on the left arm of yeast chromosome XII reveals 14
mily and a new ABC transporter homologous to the human multidrug resistance protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Molecule type: DNA

GENERAL INFORMATION:
APPLICANT: TRIEBEL, FREDERIC
APPLICANT: TRIEBEL, FREDERIC
TITLE OF INVENTION: MUMTATED PEPTIDE COMPOUNDS, DERIVED FROM hsp70, USEFUL IN CANCER
TITLE OF INVENTION: MUMBLE 19069
TITLE OF INVENTION: MAUNOTHERAPY
TITLE OF INVENTION: IMMUNOTHERAPY
TITLE OF INVENTION NUMBER: PS/09/673,795

j Sequence 174. Application US/09513783A
j Patent No. 6416959
j GENERAL INFORMATION:
j APPLICANT: Giuliano, Kenneth A.;
j APPLICANT: Kapur, Ravi
j TITLE OF INVENTION: A System for Cell Based Screening
j TITLE OF INVENTION: A System for Cell Based Screening
j CURRENT APPLICATION NUMBER: US/09/513,783A
j CURRENT APPLICATION NUMBER: US/09/513,783A
j CURRENT PILING DATE: 2000-02-25
j NUMBER OF SEQ ID NOS: 180
j SSEQ ID NO 174
j LENGTH: 890
                                                                                                                                               COMPUTER TEACHER FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/441,139
FILING DATE: 15-MAY-1995
CLASSIFICATION: 435

Identifying mutant peptides from heat-shock protein 70, for treatment of cancer.

Claim 10; Page 6; 56pp; French.

This peptide corresponds to amino acid residues 286-295 of the human heat shock protein 70 (hsp70). The invention relates to a method of identifying peptides, derived from hsp70 that stimulate a tumour-specific T cell response. Identification of the hsp70 peptides that have at least one mutation or alteration compared with the native sequence, and induce encoding DNA from one or more tumours; (ii) amplifying hsp70 sequences into a vector that can be replicated in bacteria; (iii) sequencing fragments in each cultured bacterial colony to identify any hsp70 mutations, and (iv) determining the immunogenicity of the mutant peptides identified. The peptides, optionally formulated with an agent that induces cellular stress, are used for treatment of cancer,

Sequence 10 AA;

```
the amino acid sequence of fragment 2 relating to position 286-295 of human heat shock protein 70 (HSP70) is given. The new invention relates to lymphocytes which recognise cells of a patient in which overexpression of HSP has been induced. Overexpression of HSP leads to a substantial increase in the numbers of HSPs and HSP epitopes presented on the pericellular membrane. Recognition of increased numbers of HSP epitopes or cell pericellular membranes by lymphocytes elicits a cytotoxic response which kills the target cells. As a further embodiment of the invention, HSP70 epitopes are mutated prior to being loaded into antigen the pericellular infections by vaccination. The tolerance of the organism to the tumour or to the virus associated HSP is broken using an immunogenic mutated form of HSP and induction of a stress on the target tumoural or intracellular infected cells.
                                                                                                                                                                                                                                                                        ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Lymphocytes useful for treating cancer, recognizes specifically transformed human cells with induced and increased membrane expression of
particularly solid cancers (carcinoma, sarcoma, melanoma, neuroblastoma, cancers of head and neck, particularly kidney cancer). The peptides may also be used to increase the proportion of tumour-specific cytotoxic T lymphocytes in a cell culture and/or induce these calls to secrete cytotoxic factors (specifically interleukin-2, interferon-gamma and tumour necrosis factor), particularly where the cells are used to stimulate immune defences. The method identifies peptides with high immunogenicity and high specificity for particular HLA (human leucocyte

the amino acid sequence of fragment 3 relating to position 286-295 of human heat shock protein 70 (HSP70) is given. The new invention relates to lymphocytes which recognise cells of a patient in which overexpression of HSP has been induced. Overexpression of HSP leads to a substantial increase in the numbers of HSPs and HSP epitopes presented on the pericellular membranes Recognition of increased numbers of HSPs piptopes or cell pericellular membranes by lymphocytes elicits a cytotoxic response which kills the target cells. As a further embodiment of the invention, HSP70 epitopes are mutated prior to being loaded into antigen presenting cells. This has the effect of increasing the immune response to HSP and helps direct the immune response to specific cells, (e.g. cancer cells). HSP70 fragments are useful for treating cancer or intracellular infections by vaccination. The tolerance of the organism to the tumour or to the virus associated HSP is broken using an immunogenic mutated form of HSP and induction of a stress on the target tumoural or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0

The hsp70 peptides provide reliable differentiation between diabetes types I and II. The peptides induce a shift of the T cell response from Th1 (proinflammatory) to Th2 (antiinflammatory). They can be used (a) for treatment or prevention of earthchmantosus, multiple sclerosis and rheumatorid arthritis; and (b) for actyhematosus, multiple sclerosis and rheumatoid arthritis; and (b) for activated in vitro with (A), or with heat-shock protein 70 and the responding cells are selected, attenuated and then returned to the

                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to oligonucleotide clones originating in barley (Hordeum vulgare) which contain single nucleotide polymorphisms (SNP). The oligonucleotides may be used for analysis of SNPs among barley varieties, identification of particular varieties and genotype-phenotype analysis, isolation of specific genes and creation of new varieties by transformation of barley varieties with them and production of new barley varieties with desired properties. The present sequence represents an oligonucleotide clone sequence featured in the specification. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
Barley; single nucleotide polymorphism; SNP; genotype-phenotype analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                        Single nucleotide polymorphism sites in barley varieties and DNA sequences containing them for analysis and identification of barley varieties and production of barley transformants with desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; heat shock protein; HSP70; chromosome 6p21.3-22; stress; chromosome 14q22-24; transcription; rheumatism; schlzophrenia; depression; nephrotic syndrome; SHSP70.

Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequence. Human heat shock proteins are located on chromosomes 5921.3-22 and 14922-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                               Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                             This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 this sequence represents the human heat shock protein SHSP70 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; heat shock protein; HSP70; chromosome 6p21.3-22; stress;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chromosome 1492-24; transcription; rheumatism; schizophrenia; depression; nephrotic syndrome; SHSP70.
                                                                                                                                                                                                                                                                                                                                                                                     Score 47; DB 3; Length 554;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14Q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNN under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                                                                                                                                               sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                 This sequence represents the human heat shock protein SHSP70 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human Hsp72; heat shock protein 72; chromosome 6p21.3; Hsp72 inhibitor; expression modulator; JNK phosphatase inhibitor; antiproliferative; drug screening; cancer; leukaemia; lymphoma; solid tumour; sarcoma; carcinoma; breast cancer; prostate cancer; premalignant condition.

The invention relates to a novel method of identifying compounds that inhibit proliferation of cells comprising contacting a test compound with a call which verexpresses Hsp72 (heat shock protein 71), and determining if the test compound inhibits activity or expression of Hsp72.

Conditionally, Hsp72 is contacted with the test compound under optimum conditions to allow the two components to interact and bind, forming a conditions to allow the two components to interact and bind, forming a complex which is detected. The invention also relates to a method of identifying compounds that inhibit Hsp72—mediated JNK phosphatase of certivation, comprising ocntacting a test compound with a cell which expresses Hsp72, exposing the cell to a heat induced stress and determining if the compound inhibits JNK phosphatase activity. The invention additionally encompasses compositions comprising an inhibitor of Hsp72 or JNK phosphatase activity are useful for inhibiting the phosphatase or Hsp72 is used to treat a proliferative disorder such as carcinomas, breast cancer, prostate cancer). The compounds that inhibit msp72 is used to treat a proliferative disorder such as carcinomas, breast cancer, prostate cancer). The compounds that inhibit Hsp72 function are administered to a patient compounds that inhibit Hsp72 function are administered to a patient compound that inhibit Hsp72 function are administered to a patient compound that inhibit Hsp72 function are administered to a patient compound that inhibit Hsp72 function are administered to a patient compound that inhibit Hsp72 function are administered to a patient carcuity relative to normal levels. The present sequence represents human Hsp72 used in the exemplifications of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                   Identifying compounds that inhibit proliferation of cells and capable of modulating the expression of heat shock protein 72 gene and/or activity of Hsp72 useful for treating cancers such as leukemia, lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ÷
